Задание 2.1.3.

Прочитай текст. Расспроси своего друга о его рабочем дне.

My working day.

I usually start my day with getting up and doing all things that everybody does in the morning: washing, having breakfast, etc. Also, I got used to gather my learning tools: pencils, exercise-books, text-books in the morning. Then I usually go to the college. Fortunately, father takes a car every morning and he often picks me up and drives me to the doors of our university building.

And soon the lectures and lessons begin... We have from 2 to 4 lectures every time, depending on day. I like studying in the college more than in the school because in college it is mostly allowed to miss some lectures (of course, later you should take a summary from your mate and copy it). So, a student is much more free, than pupil is.

After the lessons I usually return home where I have dinner and start thinking about my ways of spending the rest of the day. Very often I go to my friend's places. During the early autumn and summer I often go to the sports ground or on the beach. I also like visiting different sports events. So, the world is full of enjoyable things to do.

On returning home I usually start doing my homework (perhaps, it is the most dull part of the day). Having finished it, I open a book and read it or watch TV. At last, I go to the bed. Of course, I would like to tell you more about myself and my working day, but, unfortunately, my time is rather limited and I have got a lot of homework to do. Generally, now you know about my working day enough.

Reading Newspapers and Magazines

Newspapers and magazines play a very important in our life. There is no family that doesn't receive or buy one or two newspapers or magazines. All newspapers and magazines inform the public about events, analyse them, express public opinions. Of course, they have changed greatly during the recent years. I'd like to say a few words about the changes that have taken place in Russian press. In the 80s there were several central newspapers which expressed the official viewpoint on everything. All newspapers published the same views. The censorship was very strict. In the middle of the 80s the era of glasnost began. It influenced the press greatly. They started publishing problematic materials. The headlines were changed. The editors-in-chief were elected. There appeared a great number of new newspapers and magazines.

Nowadays there are many daily, weekly, monthly editions. We can subscribe to some newspapers, others we can only buy. There are also newspapers which are distributed free in streets by metro-stations or put into mail-boxes. Newspapers are issued by different companies, independent editorial boards and even individuals. A lot of people stop subscribing to newspapers. Some of them can't do it, because newspapers very expensive, some of them are afraid of getting the stress reading newspapers and some people prefer watching TV and listening to radio. That is the cause of great competition among the newspapers. They organise all kinds of lotteries, prizes, tours and so on. A special question is that of financed support of the press. The newspapers are not supported by the state any more, so they have to look for sponsors and publish a lot of advertisements. If we take a usual newspaper we'll find an editorial on the front page which covers the most important events of the day. Then we can find

news items, current events, different reports and interviews, some articles and reviews on culture. The last page is usually dedicated to sports events and TV programmes.

Задание 2.5.3

Прочитай и ответь на вопросы.

1. Walk, don't drive. Vehicles are among the worst sources of air pollution. Walk short distances, ride a bicycle, or use public transport if it is available. Failing that, try to share a car.
2. Turn down the heating. Just by lowering the temperature in your house by 2C you can save a lot of energy. Switch off light bulbs when you are not in the room, and computers, TVs and stereos when you leave them overnight.
3. Use less water. Water the garden at night so most of your spray does not evaporate in the sun. Don't leave the tap running when you brush your teeth. Take showers, not baths. Wash the dishes by hand. Dry your clothes on a line, not in a machine that burns fuel.

4. Shop smart. Avoid products that are dangerous to the ozone layer. Look for ozone-friendly sprays and keep away from genetically modified foods. Buy from businesses that take an effort to protect the climate; boycott ones that don't, and let them know about it.
5. Recycle waste. Buy recycled paper. Recycle newspapers, cardboard, aluminium cans, glass jars and plastics.
6. Avoid packaging. There is a market in Switzerland where you can buy toothpaste not in a tube. You may not want to go this far, but it's not difficult to avoid products with unnecessary packaging. Take your own shopping bag to the supermarket, rather than using up countless flimsy plastic ones, or use boxes.
7. Initiate a climate-friendly workplace. Up to 80 per cent of all our waste is generated in the workplace. Set up a "green group" to monitor your company's approach to waste and recycling.
8. Vote for change. Use your vote to encourage green policies. Write to your elected representatives and ask them what they are doing to support the environment. Pressure for change can start in your street. Urge local politicians to clean up their act and make recycling centers more accessible.
9. Plant a tree. Trees are a great source of oxygen. Plant a tree in your garden. Failing that, avoid products made from new teak or mahogany. Carefully check the suppliers of garden furniture, and if you are not sure where they come from, don't buy anything.
10. Join the movement. Sign up with your favourite environmental group and send money or, even better, volunteer to help to clear up beaches and wasteland. Above all, do something.

1. Seven Wonders of the World are works of art and architecture regarded by ancient Greek and Roman observers as the most extraordinary structures of antiquity. Only one wonder of the seven, the pyramids of Egypt, still stands today.
 2. It was carved in the mid-5th century BC by the Greek sculptor Phidias. The colossal statue was the central feature of the Temple at Olympia, where the Olympic Games were held. It was considered to be Phidias's masterpiece. The seated figure of the king of the Greek gods was 12 m in height and made of ivory and gold. An earthquake probably leveled the temple in the 6th century AD, and the statue was later taken to Constantinople, where a fire destroyed it.
 3. The lighthouse, built in about 280 BC during the reign of Ptolemy stood more than 134 m tall — about as high as a 40-storey building. A fire was kept burning at its top to welcome sailors coming to the Egyptian land. Storms and an earthquake had damaged the lighthouse by 955 AD; an earthquake completely destroyed it during the 14th century.
 4. They consisted of several tiers of platform terraces built upon arches and extending to a great height. Accounts of their height range from about 24 m to a less reliable estimate of more than 90 m. Trees and colourful plants and flowers grew on the terraces, irrigated with water brought up from the Euphrates River.
- A huge bronze statue of the Greek sun god Helios was erected in about 280 BC to guard the entrance to the harbor at Rhodes, a Greek island off the coast of Asia Minor. The statue stood about 32 m tall and according to legend, it straddled the harbor. An earthquake destroyed it in 224 BC.
5. Queen Artemisia built the tomb in memory of Mausolus, her brother and husband, in what is now southwestern Turkey. It was decorated by the leading sculptor of the age. An earthquake probably toppled the structure, and its materials were later used as building material. Only fragments remain of this tomb from which the word *mausoleum* derives.
 6. They were built on the west bank of the Nile River at Giza during the 4th Dynasty (about 2575 to about 2467 BC). The oldest of the seven wonders, they are the only one remaining nearly intact today. Their white stone facing was later removed for use as building material in other places. According to the Greek historian Herodotus, ten years were required to prepare the site and 100,000 labourers worked thereafter for 20 years to complete the largest of them, which contains the king's tomb.
 7. An imposing temple in honour of the goddess of the hunt was built in what is now Turkey in the 6th century BC and rebuilt after it burned in 356 BC. Archaeologists estimate that the temple measured 104 m in length and 50 m in width. Its 127 stone columns stood more than 18 m tall. The temple was destroyed by the Goths in 262 AD.

History of Railroad Formation. George Stephenson

George Stephenson was born in Wylam, 9,3(15 km) miles west of Newcastle upon Tyne, in 1781. His parents were so poor that they could afford only one room in a cottage. One of his earliest tasks was to keep I his younger brothers and sisters out of the way of the coal wagons which were dragged by horses along the wooden tramway in front of the cottage door.

After various jobs at collieries learning all he could about Newcomen's pumping engine, he became engine-wright at Killingworth Colliery in 1812. Among other things like cobbling shoes and dressmaking (to earn extra money), Stephenson learned to write, to read and do arithmetic. He learnt all in the evenings when he had finished his long day's work at the pit. He studied his engine carefully and gradually made improvements on it. His employers allowed him to alter the engine and even gave him money to build a new one and allowed other workmen at the colliery to help him. So he gradually learnt the way steam could work and he built his engines aided by his son Robert.

False or true? Correct the mistakes

1. George Stephenson was born in the seventeenth century.
2. His parents were rich enough to live in cottage.
3. To earn extra money Stephenson could cobble shoes and make dress.
4. He learned to read, write and do arithmetic at a local school.
5. George Stephenson made improvements on engine. His son didn't find George's work interesting

TURKISH RAILWAYS

Turkish State Railways (TCDD) is a corporation, which plays an important role in the development of the Turkish economy.

The history of the railways in Turkey began on 23 September 1856 when, by a decree of the Ottoman Sultan, a British company was awarded the privilege of constructing and operating a 130 km line between Izmir and Aydin. The corporation "National Railways" was established in 1923, when the country became a republic. Today the length of the railway network is 10,361 km, including 8,430 km of main lines and 1,931 km of secondary lines.

In almost 150 years of their history, Turkish Railways have undergone a number of changes. The new strategy includes plans for upgrading the existing lines and stations, modernizing rolling stock. Much is done to create a positive image among the public and attract customers to the railways. As a part of a new strategy, TCDD has purchased and put into operation new, more comfortable passenger carriages such as:

- Fatih Expressi, new Pullman coaches of high comfort level, with aircraft-type seats, air-conditioning and a modern lighting system. Lunch is offered during the journey;
- new coaches designed for modern business travelers. They consist of three double-rooms, a sitting room, a toilet, a bath and an American bar, with the atmosphere of a first class hotel on wheels. Some facilities such as telephone, fax and data modem terminals are also available to passengers;
- special sleeping cars provide the passengers with a high level of comfort and everything to make him feel at home;
- restaurant cars with improved quality Turkish food uphold the railway tradition of hospitality.

INDIA'S RAILWAY PROJECT

The first plans for constructing a railway line along the west coast of India were proposed in 1880s but they were not carried out because there were many problems with the technology of the day. A

feeble attempt to extend the line from Bombay to Mangalore was made much later but between 1964 and 1986 only 100 km of track were laid down. In 1990 the Konkan Railway Corporation was formed to build the remaining 760 km within 5 years. The new railway linking Bombay with Mangalore was inaugurated in 1996. It is 1127 km shorter than the old route.

The reduction in distance enabled the Konkan Railway to cut down the journey time. Even if trains run at a maximum of only 100 km per hour, the journey time between Bombay and Mangalore will come down from 41 hours to 15 hours. Train speeds of 130 km per hour or 160 km per hour will provide timesavings that are even more spectacular. Besides it had been estimated that fuel saving of more than Rs2 billion was achieved.

About 11% of line is in tunnels. These tunnels are equipped with sensors to monitor air pollution, temperature and visibility. The ventilation system is activated automatically via the data obtained from the sensors. The exact position of a train within the tunnel is indicated on a panel in the traffic control room* at the tunnel entrance. The Konkan Railway has the longest railway tunnel in India (its length is 6.5 km), the tallest viaduct in Asia (the 64 m – high). There are 2,134 bridges on the line.

TRANSPORT DIFFICULTIES IN MOSCOW IN THE 1920's AND 1930's

- (1) In the 1920's the transport situation in Moscow was difficult. Indeed, very few buses were in operation in Moscow. Not many people had their own cars. There were no city railways. However, every year 150,000 suburban passengers used railway stations, and they needed an efficient system of city transport.
- (2) In 1930, the trams handled 90 per cent of the passenger traffic in the capital, and they were overcrowded (переполненный). Besides, the system was often fully paralysed in winter because of heavy snowfalls.
- (3) In order to perfect the city transport a project of building Metro in Moscow was proposed. According to this project the construction of the underground railways was to be initiated in 1932.
- (4) Initially, the construction of the metro system went on slowly. The metro builders encountered many difficulties because they had no experience in building underground railways. But during the second year the work progressed more rapidly thanks to mechanical equipment which was used on a large scale. Most of this equipment was developed and produced in the USSR. Besides, the workers themselves became more experienced.
- (5) Nowadays the advantages of the Moscow Metro are well known to everybody. Our Underground is the most beautiful and efficient transportation system compared with other subways abroad.

TRACK CONSTRUCTION

(1) It is not an easy job to build a railway. The railway is built on a strip of land which is called the right-of-way (полоса отвода).

- (2) The right-of-way must be carefully prepared for laying down the tracks. At first, it must be cleared from trees, bushes and then graded (выравнивать) by special machines known as graders.
- (3) After the right-of-way is cleared and graded the permanent way is constructed. Ties and rails are laid upon the ballast foundation and the ballast is packed between the ties and on each side of the track to hold the ties in place.
- (4) The methods of railroad building have changed greatly in recent years. The greatest change has been the replacement of hand labour by machines, such as powerful bulldozers, huge excavators, scrapers, graders, etc.
- (5) The most modern method of railway construction is laying the track in pre-assembled (сборный) lengths, that is, the lengths of rails to which the sleepers are already attached. This work is carried out by a high-speed track-laying crane, a wonderful machine which lays pre-assembled lengths of track in a few minutes. One of the most efficient machines of this kind is the Platov track-laying crane having an output of 900-1000 meters of track per hour.

THE OPERATION OF TRAINS

All railroads are divided into divisions in order to simplify the problem of running trains. A division may be of different length.

Each railway has two kinds of trains: regular trains and extra trains. A regular train is a «scheduled» train, a train listed on the railroad timetable. Regular trains have definite times for arrival and departure. All regular trains may be both freight and passenger ones. Passenger trains are subdivided into fast expresses which have long runs and make few stops and local trains which stop at all stations. Freight trains are used for carrying goods. Some freight trains make few stops during their runs and some freight trains stop at small stations to load and unload freight.

«Extra» trains are not scheduled in the railroad timetable.

THE RECONSTRUCTION OF THE KURSKY TERMINAL IN MOSCOW

(1) As is known, all the nine railway terminals in Moscow were erected many years ago. As they were unable to cope with the increased flow of passengers, some of them were reconstructed whereas others are to be rebuilt in the near future.

(2) The Kursky terminal was the first to be reconstructed. While designing the new building the civil engineers and architects faced a lot of problems which were to be solved in order to make the terminal convenient for passengers and attractive. One of the most important tasks was to make it capable of servicing a great flow of passengers going to the Black Sea Coast. For this purpose the main hall was considerably expanded, and now it can accommodate up to 6,000 passengers.

(3) The travelling public is provided with numerous conveniences: the information centre, the waiting-rooms, the restaurant, a large number of automatic baggage cells etc. There are enough ticket windows so that passengers can reserve tickets in a few minutes.

(4) The station handles now about 40,000 long-distance passengers and 750,000 suburban passengers daily. The designers provided for different platforms to service suburban and long-distance passengers thus facilitating the problem of train operation.

(5) Being finished with glass and aluminium, the new building of Kursky terminal is now regarded one of the most remarkable and modern buildings in Moscow.

CARS

The freight cars are the cars that are used by the railroads for carrying different kinds of freight or goods. There are many different kinds of these cars. The flat car is a platform car with no sides or ends above the floor. It is used to carry logs, steel rails and some other long articles as well as heavy pieces of machinery.

“Open-top-cars” have sides and the floor, but they have no roof. They are used to carry coal.

There are two common types of “open-top-cars”, the gondola and the hopper car. The chief difference between these two is that the gondola car has a flat floor or bottom, while the hopper car has a floor

which slopes downwards from each end, and some cars from the sides also. The bottom of the car has one or more hoppers with doors that open downwards.

The most common type is the box-car. The body of the car is a huge box with a sliding door on each side.

The refrigerator car is a special kind of a box-car used for carrying perishable goods such as meat, fruit etc

Liquid freight, such as oil, may be transported in tank-cars. The tank-cars are made of steel. At the top of a tank is a dome with an opening through which the tank is filled and emptied. There is also a valve at the bottom of the tank to empty it.

A **passenger car** is a car that is used by the railroads for transporting passengers from one station to another. There are several kinds of passenger cars as there are several kinds of freight cars. The kind of cars used most is the coach. It has many rows of seats on each side, with the aisle in the centre.

One of the most important railroad inventions was a sleeping car. A modern sleeping car was invented in 1858.

All the long distance trains on the railroads now carry dining-cars, at the end of the dining-car being a kitchen, small and compact, but completely furnished with all that is needed for preparing and serving food. The dining-car has a double row of tables.

Most passenger trains carry baggage and mail, and there are special types of cars for this service.

The baggage cars have large sliding side doors through which different articles of baggage may be loaded and unloaded. In some mail cars the letters are sorted while the train is on its way. These mail cars are often called railway post-office.

Some railways have parlour cars. A parlour car is a comfortable passenger car, which is not divided into compartments and has comfortable armchairs for the passengers, who usually travel by day.

Задание 2.12.2 (по выбору)

It is widely known that education helps to form a personality and prepares for life.

In Russia everyone has the right to receive education guaranteed by the Constitution. This right is realized by the broad system of compulsory secondary education, vocational, specialized secondary and higher education, part-time education, correspondence course and also by scholarships and grants.

In Russia there is a nine-year compulsory education, but to enter a university one must study two years more. At the age of six or seven Russian children begin to attend primary school. But most of them have already learned letters in kindergartens, which are a part of primary education now. Primary and secondary schools together comprise eleven years of study. Every school has a core curriculum of Russian, Mathematics, Science, Physical Training. There is also a variety of elective subjects, which are taught at lyceums and gymnasiums.

After finishing secondary school, lyceum or gymnasium one can go on to higher education. All applicants must take competitive examinations or total state examinations in two or three subjects.

Задание 2.13.2

The Samara State Railway University is one of the youngest state higher schools in the Samara Region.

It was founded in 1973.

At that time there was only one faculty with 75 students. In 1975 it was divided into two faculties: Railway Construction and Railway Operation.

At present about 10,000 students get higher education at day-time and extra-mural departments. At present about 10,000 students get higher education at day-time and extra-mural departments.

Training is provided on 14 specializations.

Applicants are admitted on the basis of their results in the unified state examinations for the secondary school.

The complete course of studies at the higher school lasts 5 or 6 years for the day-time and extra-mural students respectively.

The academic year is divided into 2 terms.

Tests and exams are taken at the end of each term.

Турецкие государственные железные дороги –это корпорация, которая играет важную роль в развитии экономики турции.

История железных дорог Турции началась 23 сентября 1856, когда указом Оттомана Султана, Британской компании разрешили строительство и управление 130 км линией между Измиром и Аудином. Компания «Национальные железные дороги» была основана в 1923 году, когда страна стала республикой. Сегодня протяженность железнодорожной сети составляет 10 361 км, включая 8430 км магистралей и 1931 км второстепенных линий.

За 150 летнюю историю турецкие железные дороги претерпели значительные изменения. Планируется улучшить существующие линии станции, модернизировать подвижной состав. Много делается, чтобы создать позитивное отношение у народа и привлечь клиентов. Частью новой стратегии является введение в эксплуатацию более комфортабельных пассажирских вагонов таких как

- новых вагонов повышенной комфортности с сиденьями самолетного типа, кондиционированием и современной системой освещения. Во время поездки подается обед.
- новые вагоны бизнес класса. Они состоят из 3 спален, гостиной, ванной и туалетом, американским баром, с атмосферой первоклассного отеля на колесах.

Задание 3.2.2

Транспортные трудности в Москве 1920-30 годов.

В 1920-х транспортная ситуация в Москве была трудной. В Москве было мало автобусов. Немного людей имели личные машины. Не было городских железных дорог. Однако, ежегодно 150000 пассажиров пользовались пригородными железными дорогами и им нужна была эффективная система городского транспорта.

В 1930-х трамваи осуществляли перевозку 90 % пассажиров столицы, и они были переполнены. Кроме того часто система была парализована из-за сильных снегопадов.

Для того чтобы улучшить транспортную систему был предложен проект строительства метро в Москве. Согласно этому проекту строительство метро должно было начаться в 1932 году.

Вначале строительство метро проходило медленно. Метростроители столкнулись со многими трудностями потому что у них не было опыта в строительстве подземных железных дорог. Но на второй год строительства работа стала продвигаться быстрее, благодаря широкому использованию нового оборудования.

Сегодня преимущества Московского метро хорошо известно каждому. Наше метро самая красивая и эффективная транспортная система

Задание 3.2.3

- 1) The underground railway is the quickest, safest, most reliable and comfortable means of city transport.
- 2) Metro can solve the problems of carrying a great number of passengers within urban and suburban areas as well as the problems of traffic jams, air contamination and noise.
- 3) Subways are usually built under city streets, but in order to take shortcuts they often must pass under rivers.
- 4) . The sleepers are only 0.9m long. They are shorter than those of the railroad track which are 2.7m long. The sleepers of the normal track are laid upon ballast made of broken stone or other materials. The crossties of the underground railway are laid directly on concrete base.
5. If the ballast were made of slag, gravel, sand or even broken stone, the train would be followed by the dust clouds.
- 6) Metro trains are powered by steam or electricity
- 7) The current is obtained from the third rail.
- 8) The Underground carrying capacity depends on the number of coaches and the frequency of train running
- 9) Nowadays there are underground railways in 80 cities all over the world

Задание 3.3.

1 Careful track maintenance, efficient brakes and reliable signaling determine the safety on railways.

2. Track-testing cars help the railwaymen keep the track in a good operating condition.

3. George Westinghouse devised the method of stopping trains by compressed air.

4. The early brakes were unsatisfactory. They were hand-operated so they give way to the Westinghouse brakes.

5. Increasing number of trains made railways invent different methods of signaling.

6. Under CTC all train movement are governed from a central point where there is a large illuminated panel with a diagram of all of all the tracks in the controlled section

7. No engine driver would be able to read block signals easily at a speed of, say, 200 kph. Weather conditions can also prevent the driver from reading the wayside signals. Sometimes the drivers themselves are not careful enough.

8. The key to solve the problem of train operation has been found in the so-called semi-automatic driving of trains moving at top speed.

Задание 3.4.2

Строительство железнодорожного пути.

Нелегко строить железную дорогу. Железная дорога строится на полосе отвода.

Полоса отвода должна быть тщательно подготовлена к укладке железнодорожного полотна. Сначала ее нужно очистить от деревьев и кустарников и разравнять грейдерами.

После того как полоса отвода очищена и выравнена стротся верхнее строение пути. На балласт укладываются шпалы и рельсы и балласт утрамбовывается между шпалами.

За последние годы методы строительства сильно изменились. Большим изменением стала замена речного труда машинами такими как грейдеры, скреперы, экскаваторы.

Самый современный метод строительства заключается в укладке сборных рельсовых плетей. Эта работа выполняется при помощи высокоскоростного путеукладочного крана, который укладывает рельсовую плеть за несколько минут.

Задание 3.4.3

1. The track is one of the basic features of a railway. It is also called the permanent way. The permanent way consists of rails, ties, and ballast. The distance between the rails is called the gauge. The standard gauge in most countries is 1,435 mm while in Russia the railroads have a gauge of 1,524 mm. The place where the ends of the rails meet in the track is known as the rail joint. The rail joint has always been the weakest part of the track for nearly all the rails wear out first at the ends.

Some railroads have two or more tracks In order to make the trains pass from one track to another the

railroads have a witch which is a very important element of the track. The rails differ greatly in weight according to the kind of traffic which they have to carry when placed in the track. The largest and heaviest rails are laid in the main-line tracks for it is these tracks which carry the largest volume of traffic.

2. The ties, on most tracks were almost all of wood and in order to make them last longer they were treated with creosote. The ties are not laid upon the earth for the earth cannot support the track structure. They rest upon a bed of crushed rock or gravel, which is called ballast.

3. Ballast is a very important element of the track for it is the ballast which supports the track structure, holds the track in position and provides needed drainage.

Организация движения.

Все железные дороги делятся на участки для упрощения организации движения. Участок может быть различной длины.

Железная дорога имеет два вида поездов: регулярные и спец поезда. Регулярный поезд ходит по расписанию. Регулярные поезда имеют определенное время отправки и прибытия. Все регулярные поезда.

огут быть грузовыми или пассажирскими. Пассажирские поезда делятся на скорые, которые имеют длинный маршрут и небольшое количество остановок и местные, которые останавливаются на каждой станции. Грузовые поезда используются для перевозки грузов. Некоторые грузовые поезда имеют несколько остановок на всем протяжении маршрута для погрузки и разгрузки.

Спец. поезда не вносятся в расписание

Задание 3.5.3

1. Accidents which took place on the railways in the early days made specialists devise a great number of systems and devices in order to ensure the safe operation of trains

2. Sections or divisions are operated just as a small railroad.

3. Regular trains are all numbered. An extra train is not scheduled in the time-table; special trains, work trains and wreck trains are examples of extra trains.

4. The fact is that the railways make up different time-tables for the summer and for the winter service and that the weekday time-table is not the same as that of Saturday and Sunday. Besides, one should not forget that express trains and slow local trains have to run on the same tracks.

5. The operating business also includes the making of separate working programmes for locomotives and train crews, the planning of regular switching operations and so on.

Задание 3.6.2

Строительство Курского вокзала в Москве.

Как известно, все 9 железнодорожных вокзалов в Москве были построены много лет тому назад. Так как они стали неспособны справиться с возрастающим потоком пассажиров, многие из них были перестроены, другие же будут перестроены в ближайшем будущем.

Курский вокзал был первым из перестроенных. Проектируя новое здание, гражданские инженеры столкнулись со многими проблемами, которые нужно было решить, чтобы сделать вокзал удобным и привлекательным для пассажиров. Одной из главных задач было сделать его способным справиться с растущим пассажирским потоком с побережья Черного моря. С этой целью, главный зал ожидания был расширен и теперь он вмещает до 6000 пассажиров.

Пассажирам предоставляются различные услуги: информационный центр, комнаты ожидания, ресторан, камеры хранения и т.д. Билетных касс такое количество, что пассажир может приобрести билет за несколько минут.

Ежедневно вокзал обслуживает 40000 пассажиров дальнего следования и 750000 пригородных пассажиров. Проектировщики предусмотрели различные платформы для пригородных и поездов дальнего следования.

Задание № 3.6.3.

Критерии оценки:

Контрольная работа состоит из трех заданий. Выполнение каждого задания оценивается отдельно. Окончательно выставляется среднеарифметическая оценка.

Задание 1.

Критерии оценки знания лексического и грамматического материала.

<i>Оценка</i>	<i>Критерии: правильно выполненные задания</i>
5 «отлично»»	от 85% до 100%
4 «хорошо»	от 75% до 85%
3 «удовлетворительно»	от 61% до 75%
2 «неудовлетворительно»	до 61%

Задание 2

Критерии оценки письменных переводов.

Баллы	Критерии оценки
«5»	Поставленная задача решена полностью, перевод лексики адекватно коммуникативной задаче, грамматические ошибки либо отсутствуют, либо не препятствуют передачи основного содержания текста.
«4»	Коммуникативная задача решена полностью, но были допущены незначительные лексические и грамматические погрешности при переводе.
«3»	Коммуникативная задача решена, но при переводе допущены грубые лексические и грамматические ошибки.
«2»	Коммуникативная задача не решена ввиду большого количества лексико-грамматических ошибок или недостаточного объема текста.

Задание 3

Критерии оценки устных развернутых ответов.

Оценки	Коммуникативное взаимодействие	Произношение	Лексико-грамматическая правильность речи
«5»	Адекватная естественная реакция на реплики собеседника. Проявляется речевая инициатива для решения поставленных коммуникативных задач.	Речь звучит в естественном темпе, учащийся не делает грубых фонетических ошибок.	Лексика адекватна ситуации, редкие грамматические ошибки не мешают коммуникации.
«4»	Коммуникация затруднена, речь учащегося неоправданно паузирована	В отдельных словах допускаются фонетические ошибки (например замена, английских фонем сходными русскими). Общая интонация в большой степени обусловлена влиянием родного языка.	Грамматические и/или лексические ошибки заметно влияют на восприятие речи учащегося.
«3»	Коммуникация существенно затруднена, учащийся не проявляет речевой инициативы.	Речь воспринимается с трудом из-за большого количества фонетических ошибок. Интонация обусловлена влиянием родного языка.	Учащийся делает большое количество грубых грамматических и/или лексических ошибок.

г) Время выполнения каждого задания:

- 1.1 – тестирование – 1 минута – на 1 задание;
- 1.2 – работа с текстом – до 30 мин.
- 1.3 – беседа с преподавателем по теме – 3-5 минут
