Задание 2.1.3.

Прочитай текст. Расспроси своего друга о его рабочем дне.

My working day.

I usually start my day with getting up and doing all things that everybody does in the morning: washing, having breakfast, etc. Also, I got used to gather my learning tools: pencils, exercise-books,

text-books in the morning. Then 1 usually go to the college. Fortunately, father takes a car every morning and he often picks me up and drives me to the doors of our university building.

And soon the lectures and lessons begin... We have from 2 to 4 lectures every time, depending on day. I like studying in the college more than in the school because in college it is mostly allowed to miss some lectures (of course, later you should take a summary from your mate and copy it). So, a student is much more free, than pupil is.

After the lessons I usually return home where I have dinner and start thinking about my ways of spending the rest of the day. Very often I go to my friend's places. During the early autumn and summer I often go to the sports ground or on the beach. I also like visiting different sports events. So, the world is full of enjoyable things to do.

On returning home 1 usually start doing my homework (perhaps, it is the most dull part of the day). Having finished it, I open a book and read it or watch TV. At last, I go to the bed.

Of course, I would like to tell you more about myself and my working day, but, unfortunately, my time is rather limited and I have got a lot of homework to do. Generally, now you know about my working day enough.

Reading Newspapers and Magazines

Newspapers and magazines play a very important in our life. There is no family that doesn't receive or buy one or two newspapers or magazines. All newspapers and magazines inform the public about events, analyse them, express public opinions. Of course, they have changed greatly during the recent years. I'd like to say a few words about the changes that have taken place in Russian press. In the 80s there were several central newspapers which expressed the official viewpoint on everything. All newspapers published the same views. The censorship was very strict. In the middle of the 80s the era of glasnost began. It influenced the press greatly. They started publishing problematic materials. The headlines were changed. The editors-in-chief were elected. There appeared a great number of new newspapers and magazines.

Nowadays there are many daily, weekly, monthly editions. We can subscribe to some newspapers, others we can only buy. There are also newspapers which are distributed free in streets by metro-stations or put into mail-boxes. Newspapers are issued by different companies, independent editorial boards and even individuals. A lot of people stop subscribing to newspapers. Some of them can't do it, because newspapers very expensive, some of them are afraid of getting the stress reading newspapers and some people prefer watching TV and listening to radio. That is the cause of great competition among the newspapers. They organise all kinds of lotteries, prizes, tours and so on. A special question is that of financed support of the press. The newspapers are not supported by the state any more, so they have to look for sponsors and publish a lot of advertisements. If we take a usual newspaper we'll find an editorial on the front page which covers the most important events of the day. Then we can find news items, current events, different reports and interviews, some articles and reviews on culture. The last page is usually dedicated to sports events and TV programmes.

Задание 2.5.3

Прочитай и ответь на вопросы.

1. Walk, don't drive. Vehicles are among the worst sources of air pollution. Walk short distances, ride a bicycle, or use public transport if it is available. Failing that, try to share a car.

2. Turn down the heating. Just by lowering the temperature in your house by 2C you can save a lot of energy. Switch off light bulbs when you are not in the room, and computers, TVs and stereos when you leave them overnight.

3. Use less water. Water the garden at night so most of your spray does not evaporate in the sun. Don't leave the tap running when you brush your teeth. Take showers, not baths. Wash the dishes by hand. Dry your clothes on a line, not in a machine that burns fuel.

4. Shop smart. Avoid products that are dangerous to the ozone layer. Look for ozone-friendly sprays and keep away from genetically modified foods. Buy from businesses that take an effort to protect the climate; boycott ones that don't, and let them know about it.

5. Recycle waste. Buy recycled paper. Recycle newspapers, cardboard, aluminium cans, glass jars and plastics.

6. Avoid packaging. There is a market in Switzerland where you can buy toothpaste not in a tube. You may not want to go this far, but it's not difficult to avoid products with unnecessary packaging. Take your own shopping bag to the supermarket, rather than using up countless flimsy plastic ones, or use boxes.

7. Initiate a climate-friendly workplace. Up to 80 per cent of all our waste is generated in the workplace. Set up a "green group" to monitor your company's approach to waste and recycling.

8. Vote for change. Use your vote to encourage green policies. Write to your elected representatives and ask them what they are doing to support the environment. Pressure for change can start in your street. Urge local politicians to clean up their act and make recycling centers more accessible.

9. Plant a tree. Trees are a great source of oxygen. Plant a tree in your garden. Failing that, avoid products made from new teak or mahogany. Carefully check the suppliers of garden furniture, and if you are not sure where they come from, don't buy anything.

10. Join the movement. Sign up with your favourite environmental group and send money or, even better, volunteer to help to clear up beaches and wasteland. Above all, do something.

History of Railroad Formation. George Stephenson

George Stephenson was born in Wylam, 9,3(15 km) miles west of Newcastle upon Tyne, in 1781. His parents were so poor that they could afford only one room in a cottage. One of his earliest tasks was to keep I his younger brothers and sisters out of the way of the coal wagons which were dragged by horses along the wooden tramway in front of the cottage door.

After various jobs at collieries learning all he could about Newcomen's pumping engine, he became engine-wright at Killingworth Colliery in 1812. Among other things like cobbling shoes and dressmaking (to earn extra money), Stephenson learned to write, to read and do arithmetic. He learnt all in the evenings when he had finished his long day's work at the pit. He studied his engine carefully and gradually made improvements on it. His employers allowed him to alter the engine and even gave him money to build a new one and allowed other workmen at the colliery to help him. So he gradually learnt the way steam could work and he built his engines aided by his son Robert.

False or true? Correct the mistakes

1. George Stephenson was born in the seventeenth century.
2. His parents were rich enough to live in cottage.
3. To earn extra money Stephenson could cobble shoes and make dress.
4. He learned to read, write and do arithmetic at a local school.
5. George Stephenson made improvements on engine. His son didn't find George's work interesting

TURKISH RAILWAYS

Turkish State Railways (TCDD) is a corporation, which plays an important role in the development of the Turkish economy.

The history of the railways in Turkey began on 23 September 1856 when, by a decree of the Ottoman Sultan, a British company was awarded the privilege of constructing and operating a 130 km line between Izmir and Aydin. The corporation "National Railways" was established in 1923, when the country became a republic. Today the length of the railway network is 10,361 km, including 8,430 km of main lines and 1,931 km of secondary lines.

In almost 150 years of their history, Turkish Railways have undergone a number of changes. The new strategy includes plans for upgrading the existing lines and stations, modernizing rolling stock. Much is done to create a positive image among the public and attract customers to the railways. As a part of a new strategy, TCDD has purchased and put into operation new, more comfortable passenger carriages such as:

- Fatih Expresi, new Pullman coaches of high comfort level, with aircraft-type seats, air-conditioning and a modern lighting system. Lunch is offered during the journey;
- new coaches designed for modern business travelers. They consist of three double-rooms, a sitting room, a toilet, a bath and an American bar, with the atmosphere of a first class hotel on wheels. Some facilities such as telephone, fax and data modem terminals are also available to passengers;
- special sleeping cars provide the passengers with a high level of comfort and everything to make him feel at home;
- restaurant cars with improved quality Turkish food uphold the railway tradition of hospitality.

INDIA'S RAILWAY PROJECT

The first plans for constructing a railway line along the west coast of India were proposed in 1880s but they were not carried out because there were many problems with the technology of the day. A feeble attempt to extend the line from Bombay to Mangalore was made much later but between 1964 and 1986 only 100 km of track were laid down. In 1990 the Konkan Railway Corporation was formed to build the remaining 760 km within 5 years. The new railway linking Bombay with Mangalore was inaugurated in 1996. It is 1127 km shorter than the old route.

The reduction in distance enabled the Konkan Railway to cut down the journey time. Even if trains run at a maximum of only 100 km per hour, the journey time between Bombay and Mangalore will come down from 41 hours to 15 hours. Train speeds of 130 km per hour or 160 km per hour will provide timesavings that are even more spectacular. Besides it had been estimated that fuel saving of more than Rs2 billion was achieved.

About 11% of line is in tunnels. These tunnels are equipped with sensors to monitor air pollution, temperature and visibility. The ventilation system is activated automatically via the data obtained

from the sensors. The exact position of a train within the tunnel is indicated on a panel in the traffic control room* at the tunnel entrance. The Konkan Railway has the longest railway tunnel in India (its length is 6.5 km), the tallest viaduct in Asia (the 64 m – high). There are 2,134 bridges on the line.

TRANSPORT DIFFICULTIES IN MOSCOW IN THE 1920's AND 1930's

(1) In the 1920's the transport situation in Moscow was difficult. Indeed, very few buses were in operation in Moscow. Not many people had their own cars. There were no city railways. However, every year 150,000 suburban passengers used railway stations, and they needed an efficient system of city transport.

(2) In 1930, the trams handled 90 per cent of the passenger traffic in the capital, and they were overcrowded (переполненный). Besides, the system was often fully paralysed in winter because of heavy snowfalls.
(3) In order to perfect the city transport a project of building Metro in Moscow was proposed. According to this project the construction of the underground railways was to be initiated in 1932.
(4) Initially, the construction of the metro system went on slowly. The metro builders encountered many difficulties because they had no experience in building underground railways. But during the second year the work progressed more rapidly thanks to mechanical equipment which was used on a large scale. Most of this equipment was developed and produced in the USSR. Besides, the workers themselves became more experienced.
(5) Nowadays the advantages of the Moscow Metro are well known to everybody. Our Underground is the most beautiful and efficient transportation system compared with other subways abroad.

TRACK CONSTRUCTION

(1) It is not an easy job to build a railway. The railway is built on a strip of land which is called the right-of-way (полоса отвода).

(2) The right-of-way must be carefully prepared for laying down the tracks. At first, it must be cleared from trees, bushes and then graded (выравнивать) by special machines known as graders.
(3) After the right-of-way is cleared and graded the permanent way is constructed. Ties and rails are laid upon the ballast foundation and the ballast is packed between the ties and on each side of the track to hold the ties in place.
(4) The methods of railroad building have changed greatly in recent years. The greatest change has been the replacement of hand labour by machines, such as powerful bulldozers, huge excavators, scrapers, graders, etc.
(5) The most modern method of railway construction is laying the track in pre-assembled (сборный) lengths, that is, the lengths of rails to which the sleepers are already attached. This work is carried out by a high-speed track-laying crane, a wonderful machine which lays pre-assembled lengths of track in a few minutes. One of the most efficient machines of this kind is the Platov track-laying crane having an output of 900-1000 meters of track per hour.

THE BOYNTON RAILROAD

(1) Among the most interesting experimental monorails of the past one can mention the Boynton Railroad. This single-rail line was designed by a man named Boynton. The designer laid down his monorail on the territory of modern Brooklyn, New York, in the seventies of the last century. This line operated for two years.

(2) In order to provide stability the designer decided to suspend his locomotive from the overhead guide (направляющий) rail. The locomotive itself was a very strange vehicle. It had a single wheel eight feet1 in diameter. Besides, it had a cabin with two platforms, one above the other. The place of the driver was on the higher platform. The locomotive could achieve a speed of 60 mph.

(3) Boynton's strange monorail railroad attracted great attention of the public. However, it was never used commercially.

Internal Combustion Engines

(1) Not many people know the early internal combustion engines to have run on coal gas (каменноугольный газ). As these engines burnt gas, they had to be located near a gas-making plant and we may suppose all of them to have been stationary engines.

(2) When oil had been found in many parts of the world, an engine was designed that was capable of burning liquid fuel obtained from this new substance. Very soon the internal combustion engines became portable power plants, efficient and compact.

(3) There are different kinds of internal combustion engines. Not long ago the gasoline engine was the most common type used in spite of its serious drawbacks. The engineers consider the high cost of gasoline to be its chief disadvantage. However, it is probably the high cost of gasoline that has encouraged the construction of diesel engines.

(4) We know the diesel engine to be largely used for heavy duties including railway traction. R. Diesel himself expected his engine to find application on railways as one of the principal kinds of motive power.

Задание 2.12.2 (по выбору)

It is widely known that education helps to form a personality and prepares for life.

In Russia everyone has the right to receive education guaranteed by the Constitution. This right is realized by the broad system of compulsory secondary education, vocational, specialized secondary and higher education, part-time education, correspondence course and also by scholarships and grants.

In Russia there is a nine-year compulsory education, but to enter a university one must study two years more. At the age of six or seven Russian children begin to attend primary school. But most of them have already learned letters in kindergartens, which are a part of primary education now. Primary and secondary schools together comprise eleven years of study. Every school has a core curriculum of Russian, Mathematics, Science, Physical Training. There is also a variety of elective subjects, which are taught at lyceums and gymnasiums.

After finishing secondary school, lyceum or gymnasium on can go on to higher education. All applicants must take competitive examinations or total state examinations in two or three subjects.

rail - рельс; railway (англ.)- железная дророга; syn. railroad (амер)
means - средство, способ; by means of - посредством, с помощью.
travel - поездка, движение; v. двигаться, ехать, путешествовать; traveler - пассажир
freight - груз(ы); to carry freight -перевозить грузы.
important - важный, значительный
play a part - играть роль
develop - развивать(ся); разрабатывать, создавать; development- развитие; достижение, разработка
depend (on, upon) - зависеть (от)
fast - скорый, быстрый; fast train скорый поезд; ant. slow; slow train поезд малой скорости
safe - безопасный, надежный
(the) very - самый
operate - управлять, приводить в действие, работать; put into operation - ввести в действие (в эксплуатацию)
call - звать, называть
success - успех, удача; be a success -иметь успех, удаваться; successful a. успешный, удачный
light - легкий
construct - строить
power - сила, мощность, энергия; powerful - мощный
tractive power - тяговая сила; traction - тяга
difficult - трудный

possible - возможный
suitable - подходящий, годный
service - эксплуатация, перевозки, обслуживание; put into service - ввести в действие (в эксплуатацию); serve - служить, обслуживать
appear - появляться
wide - широкий
works - завод(ы)
follow - следовать за
thanks - благодаря
place - место, местоположение, помещать, размещать; take place происходить, иметь место
change - изменение, перемена; v. изменять(ся)
introduce - внедрять, вводить; introduction -внедрение, введение
use - использовать, использование, польза.

Турецкие государственные железные дороги –это корпорация, которая играет важную роль в развитии экономики турции.
История железных дорог Турции началась 23 сентября 1856, когда указом Оттомана Султана, Британской компании разрешили строительство и управление 130 км линией между Измиром и Аудином. Компания «Национальные железные дороги» была основана в 1923 году, когда страна стала республикой. Сегодня протяженность железнодорожной сети составляет 10 361 км, включая 8430 км магистралей и 1931 км второстепенных линий.
За 150 летнюю историю турецкие железные дороги прительпели значительные изменения. Планируется улучшить существующие линии станции, модернизировать подвижной состав. Многое делается, чтобы создать позитивное отношение у народа и привлечь клиентов. Частью новой стратегии является введение в эксплуатацию более комфортабельных пассажирских вагонов таких как
- новых вагонов повышенной комфортности с сиденьями самолетного типа, кондиционорованием и современной системой освещения. Во время поезки подается обед.
- новые вагоны бизнес класса. Они состоят из 3 спален, гостиной, ванной и туалетом, американским баром, с атмосферой первоклассного отеля на колесах.

Задание 3.1.3

1.Our country is often spoken of as a great power because it has the largest railway system in the world.
2. The total length of Russian railways is over 87,500 km
3 The old Russia could be proud of its railway scientists and engineers who constructed good steam locomotives and the passenger cars produced in Russia were the best in Europe.
4. The GOELRO Plan worked out in 1920 provided for the construction numerous power plants and a whole network of electrified railways
5. In 1929, an electric train started its run on the suburban line between Moscow and Mytishchi.
6. It was in our country that the world first mainline diesel locomotive was built and put into service on

November, 1924
7. Nowadays, Russian railways carry about 35% of the world's railway traffic.
8. Most traffic is carried by powerful diesel and electric locomotives.
9. Automation and computers introduced into many branches of railway engineering.
10. Particular attention is paid to high-speed running. Speeds of 120-150 kph are particular for the express trains

Задание 3.2.2

Транспортные трудности в москве 1920 -30 годах.

В 1920-х транспортная ситуацтя в Москве была трудной. В Москве было мало автобусов. Немного людей имели личные машины. Небыло городских железных дорог. Однако, ежегодно 150000 пассажиров пользовались пригородными железными дорогами и им нужна была эффективная ситема городского транспорта.

В 1930-х трамваи осуществляли перевозку 90 % пассажиров столици, и они были переполнены. Кроме того часто система бала парализована из-за сильных снегопадов.

Тля того чтобы улучшить транспортную систему был предложен проект строительства метро в Москве. Согласно этому проекту строительство метро должно было начаться в 1932 году.

Вначале строительство метро проходило медленно. Метростроители столкнулись со многими трудностями потмучто у них не было опыта в строительстве подземных железных дорог. Но на второй год строительства работа стала продвигаться быстрее, благодаря широкому использованию нового оборудования.

Сегодня преимущества Московского метро хорошо известно каждому. Наше метро самая красивая и эффективная транспортная система

Задание 3.2.3

1) The underground railway is the quickest, safest, most reliable and comfortable means of city transport.

2) Metro can solve the problems of carrying a great number of passengers within urban and suburban areas as well as the problems of traffic jams, air contamination and noise.

3) Subways are usually built under city streets, but in order to take shortcuts they often must pass under rivers.

4) . The sleepers are only 0.9m long. They are shorter than those of the railroad track which are 2.7m long. The sleepers of the normal track are laid upon ballast made of broken stone or other materials. The crossties of the underground railway are laid directly on concrete base.

5. If the ballast were made of slag, gravel, sand or even broken stone, the train would be followed by the dust clouds.

6) Metro trains are powered by steam or electricity

7) The current is obtained from the third rail.

8) The Underground carrying capacity depends on the number of coaches and the frequency of train running

9) Nowadays there are underground railways in 80 cities all over the world

Задание 3.3.

1 Careful track maintenance, efficient brakes and reliable signaling determine the safety on railways.

2. Track-testing cars help the railwaymen keep the track in a good operating condition.

3. George Westinghouse devised the method of stopping trains by compressed air.

4. The early brakes were unsatisfactory. They were hand-operated so they give way to the Westinghouse brakes.

5. Increasing number of trains made railways invent different methods of signaling.

6. Under CTC all train movement are governed from a central point where there is a large illuminated panel with a diagram of all of all the tracks in the controlled section

7. No engine driver would be able to read block signals easily at a speed of, say, 200 kph. Weather conditions can also prevent the driver from reading the wayside signals. Sometimes the drivers themselves are not careful enough.

8. The key to solve the problem of train operation has been found in the so-called semi-automatic driving of trains moving at top speed.

Задание 3.4.2

Строительство железнодорожного пути.

Нелегко строить железную дорогу. Железная дорога строится на полосе отвода.

Полоса отвода должна быть тщательно подготовлена к укладки железнодорожного полотна. Сначало ее нужно очистить от деревьев и кустарников и разравнять грейдерами.

После того как полоса отвода очищена и выравнена стротся верхнее строение пути. На балласт укладываются шпалы и рельсы и баласт утрамбовывается между шпалами.

За последние годы методы строительсва сильно изменились. Большим изменением стала замена речного труда машинами такими как грейдеры, скрейперы, экскаваторы.

Самый современный метод строительсва заключается в укладке сборных рельсовых плетей. Эта работа выполняется при помощи высокоскоросного путеукладочного крана, который укладывает рельсовую плеть за несколько минут.

Задание 3.4.3

1. The track is one of the basic features of a railway. It is also called the permanent way.
The permanent way consists of rails, ties, and ballast. The distance between the rails is called the gauge. The standard gauge in most countries is 1,435 mm while in Russia the railroads have a gauge of 1,524 mm. The place where the ends of the rails meet in the track is known as the rail joint. The rail joint has always been the weakest part of the track for nearly all the rails wear out first at the ends.
Some railroads have two or more tracks In order to make the trains pass from one track to another the

railroads have a witch which is a very important element of the track. The rails differ greatly in weight according to the kind of traffic which they have to carry when placed in the track. The largest and heaviest rails are laid in the main-line tracks for it is these tracks which carry the largest volume of traffic.

2. The ties, on most tracks were almost all of wood and in order to make them last longer they were treated with creosote. The ties are not laid upon the earth for the earth cannot support the track structure. They rest upon a bed of crushed rock or gravel, which is called ballast.

3. Ballast is a very important element of the track for it is the ballast which supports the track structure, holds the track in position and provides needed drainage.

15. choice - n выбор
16. etc - и так далее
17. consider - v считать, полагать; рассматривать
18. 18. similar (to) - подобный, похожий
19. double - a двойной; double-track line двухпутная железная дорога

20. principal - a главный, основной

21. link - v соединять; n связь

22. convenient - удобный, подходящий .

23. achieve - v достигать

24. save - v спасать; беречь; - экономить; savings- n экономия

25. space - n пространство; место, интервал

26. above - prep над; adv наверху; ant. below

27. point (to) - v указывать (на); point out подчеркивать, отмечать

28. solve a problem - решать проблему; solution -n решение (проблемы)

29. noise - n шум

Задание 3.5.2

Железная дорога Боинтон.
Среди самых интересных эксперементальных монорельсовых дорог в прошлом можно отметить железную дорогу Боинтон.Эта однопутная линия была спроектирована человеком по имени Боинтон. Проектировщик проложил монорельс по территории современного Бруклина, в Нью-Йорке, в семидесятые года прошлого века. Эта линия прослужила 2 года.
Для того чтобы обеспечить устойчивость пути, проектировщик решил поддержать локомотив напрвляющим рельсом. Сам локомотив был довольно странным транспортным средством. У него было одно колесо диаметром 8 футов. Кроме того у него была кабина состоявшая из двух платформ одна над другой. Машинист находился на верхней платформе. Локомотив развивал скорость 60 миль в час.

Задание 3.5.3

1. This idea was laughed at by many, but some people believed that it was promising.
2. The inventor designed his car as a military vehicle for the speed at which a single rail could be laid made it ideal for military purpose.
3. In 1897, the Russian tehnica1 society organized in Petersburg a demonstration of working models.

4. Seven miles were built but because of financial difficulties and lack of mechanical resources this project could not he realized.

5. are two different types of monorails a suspended type when a monorail car is suspended from an overhead single rail and a supported type when a vehicle is supported by the track.

Задание 3.6.2

Двигатели внутреннего сгорания.

1. Не многие люди знают, что первые двигатели внутреннего сгорания работали на каменноугольном газе. Так как эти двигатели сжигали газ, они должны били располагаться недалеко от газовыробатывающего завода и мы можем предположить что все они были стационарными.

2. Когда во многих частях света нашли нефть, двигатели были спроектированы так, чтобы они могли сжигать жидкое топливо. Вскоре двигатели стали эффективными и компактными.

3. Существуют различные виды двигателей внутреннего сгорания. Не так давно газолиновые двигатели были самыми используемыми, несмотря на их недостатки. Самым крупным недостатком инженеры считали высокую стоимость гозолина. Однако именно высокая стоимость газолина заставила их разработать дизельный двигатель.

Задание 3.6.3

1. Diesel traction is associated with the name of Rudolf Diesel who in 1892 patented an engine to run on cheap oil fuel

2. The diesel engine belongs to the class of internal-combustion engines in which the fuel is burnt inside the engine itself. It is this feature that makes the engine very efficient.

3. Railway buildings being subjected to intensive vibration and noise, these factors should be taken into account at the initial stage of construction.

4. Although the first diesel engines were too heavy to be installed in railway vehicles, R. Diesel believed these efficient prime movers to find application on the railways. He himself took part in the construction of a diesel locomotive and sparked the interest of railway specialists in diesel traction.

5. Prof. Grenevetsky designed an original diesel engine to meet the requirements of railway service while A. N. Shelest proposed a project of an original diesel locomotive and patented it in Russia and England.

6. 1,000 hp unit was built to Prof. Gakkel's design.

4. Пакет преподавателя (экзаменатора)

4.1 Пакет преподавателя для проведения аттестации по итогам 3,4,5,6,7 семестров.

Условия:

а) Вид и форма аттестации*: контрольная работа*

б) Количество заданий для студента:

- грамматический \лексический тест из 10 вопросов

- текст для перевода

- разговорные темы

в) Проверяемые результаты обучения и критерии оценок:

- умеет распознавать, переводить и употреблять в речи изученный грамматический материал, владеет необходимым лексическим материалом.

- умеет переводить (со словарем) иностранные тексты профессиональной направленности;

- умеет общаться (устно и письменно) на иностранном языке на профессиональные и повседневные темы;

4.1.1 Контрольная работа по итогам 3 семестра.

Задание 1. Выполни грамматический тест.

Задание № 3.5.3

4.2 Пакет преподавателя для проведения дифференцированного зачета (8 семестр)

Условия:

а) Вид и форма дифференцированного зачёта*: контрольная работа*

б) Количество заданий для студента:

- грамматический \ лексический тест состоящий из 10 вопросов

- профессионально ориентированный текст

- разговорные темы

в) Проверяемые результаты обучения и критерии оценок:

- умеет общаться (устно и письменно) на иностранном языке на профессиональные и повседневные темы;

- умеет переводить (со словарем) иностранные тексты профессиональной направленности;

- владеет знаниями и имеет практические навыки в образовании и употреблении: видо-временных форм английского глагола, множественного числа и притяжательного падежа существительного, местоимений, степеней сравнения прилагательных и наречий, артиклей, модальных глаголов, неличных форм глаголов, косвенной речи.

-владеет необходимым лексическим материалом, умеет распознавать, переводить и употреблять в речи изученный грамматический материал.

Задание 1. Выполни лексический тест.

Тест состоит из вопросов заданий № 3.5.1., 3.6.1.

Задание 2. Переведи письменно текст.

Задание 3.6.2

Задание 3. Составь рассказ, используя вопросы как план.

Задание № 3.6.3.

Критерии оценки:

Контрольная работа состоит из трех заданий. Выполнение каждого задания оценивается отдельно. Окончательно выставляется среднеарифметическая оценка.

Задание 1.

Критерии оценки знания лексического и грамматического материала.

Оценка		***Критерии: правильно выполненные задания***
5	«отлично»»»	от 85% до 100%
4	«хорошо»	от 75% до 85%
3	«удовлетворительно»	от 61% до 75%
2	«неудовлетворительно»	до 61%

Задание 2

Критерии оценки письменных переводов.

Баллы	Критерии оценки
«5»	Поставленная задача решена полностью, перевод лексики адекватно коммуникативной задаче, грамматические ошибки либо отсутствуют, либо не препятствуют передачи основного содержания текста.
«4»	Коммуникативная задача решена полностью, но были допущены незначительные лексические и грамматические погрешности при переводе.
«3»	Коммуникативная задача решена, но при переводе допущены грубые лексические и грамматические ошибки.

«2»	Коммуникативная задача не решена ввиду большого количества лексико-грамматических ошибок или недостаточного объема текста.

Задание 3

Критерии оценки устных развернутых ответов.

Оценки	Коммуникативное взаимодействие	Произношение	Лексико-грамматическая правильность речи
«5»	Адекватная естественная реакция на реплики собеседника. Проявляется речевая инициатива для решения поставленных коммуникативных задач.	Речь звучит в естественном темпе, учащийся не делает грубых фонетических ошибок.	Лексика адекватна ситуации, редкие грамматические ошибки не мешают коммуникации.
«4»	Коммуникация затруднена, речь учащегося неоправданно паузирована	В отдельных словах допускаются фонетические ошибки (например замена, английских фонем сходными русскими). Общая интонация в большой степени обусловлена влиянием родного языка.	Грамматические и/или лексические ошибки заметно влияют на восприятие речи учащегося.
«3»	Коммуникация существенно затруднена, учащийся не проявляет речевой инициативы.	Речь воспринимается с трудом из-за большого количества фонетических ошибок .Интонация обусловлена влиянием родного языка.	Учащийся делает большое количество грубых грамматических и/или лексических ошибок.
